

FUELMEISTER 3 BIODIESEL PROCESSING SYSTEMS WITH AMBERLITE

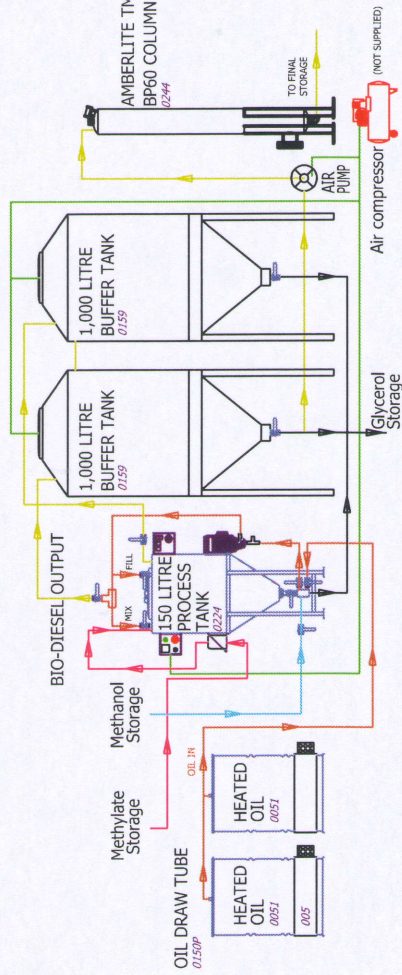

The Fuelmeister 3 is a range of professional equipment designed with business in mind. This is the ideal tool to allow you to take control of your fuel costs. This unique processing system removes the need to handle dry caustic soda - the use of liquid Methylate allows accurate dosing of catalyst which previously has only been available to industrial scale operations. The fuel is washed and purified through our specially designed columns containing Amberlite™ (Not inc) - the industry standard ion exchange resin dry wash system, for which a compressor is required.
